Maintaining your spraygun

Spraygun Maintenance -An essential practice

Spraygun maintenance is essential to ensuring it works effectively. We suggest going through the following maintenance process at least once a week.

+ Step 1

After the spraygun has been cleaned through the gunwash machine, but before being reassembled, remove fluid tip.

+ Step 2 Remove needle from spraygun body and PPS attachment, if fitted.

+ Step 3

With dedicated brush, clean inside the gun body and fluid tip with clean solvent.

+ Step 4

Wipe the spraygun needle with clean solvent until clean.

Spraygun Maintenance - An essential practice

+ Step 5

Re-assemble spraygun - now completely clean.

+ What happens when you don't maintain your spraygun

By following this process and maintaining your sprayguns you can avoid the examples shown below:
